## How do I change the PHP Max Upload file size?

In an .htaccess file in the KBPublisher installation directory change and uncomment line: php\_value upload\_max\_filesize

For example, if the desired filesize is 3 meg, the following directive would be placed in the .htaccess: php\_value **upload\_max\_filesize** "3M"

You also may want to change the following directives:

- php\_value post\_max\_size "8M"
  Sets max size of post data allowed. This setting also affects file upload.
  To upload large files, this value must be larger than upload\_max\_filesize. Default 8M
- php\_value memory\_limit "32M"
  If memory limit is enabled by your configure script, also affects file uploading.
  Generally speaking, memory\_limit should be larger than post\_max\_size. Default 8M

If you are on windows with IIS server .htaccess file will not work for you, You should update these settings in php.ini file.
