

Allow Users to Register

To set up your knowledgebase so that users register themselves:

- From the **Settings** menu choose the **Public Area -> Common** tab
- Go to the **Security/Privacy/Registering** section
- Check **Allow registration**
- Click **Save** to save the changes.

When a user comes to the site, they will see a **Register** option in the top-right-hand corner of the screen (near **login**). They can click on **Register** and will be presented with a screen of user details to fill in. What happens once they fill in the details on that screen depends on other settings in the Security/Privacy/Registering section.

- If you have specified that the user must provide **visual confirmation** before they can register, the user will also get a code to type in as part of the registration process
- If you checked **approval required for registration** then the registration request is sent to the administrator, who must approve it before the user can log in. If you did not check this option, the user can log in immediately (or at least, as soon as they get the automated confirmation message)
- If you specified a default **privilege** for new users, the user will be set up with that privilege
- If you specified a default **role** for new users, the user will be set up with that role.
