

Export Articles from the Public Area

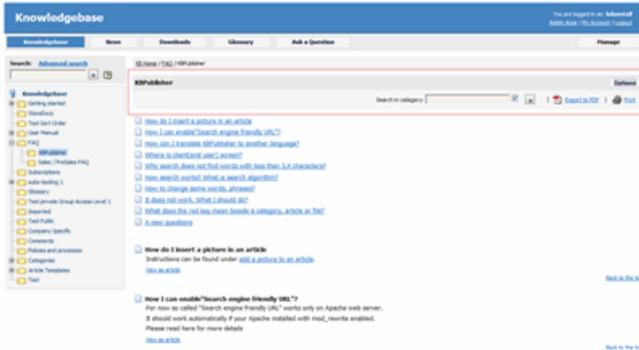

If you have purchased the export plugin, then you can set your knowledgebase up so that users can export a whole category of articles as a PDF document, or print it, from the **Public Area**.

To allow public export of articles

- Purchase the [export plugin](#) and install it
- On the **Settings** menu choose the **Plugins** tab
- Check **allow category exporting**.

To generate a PDF file or print a category from the Public Area

- Once allow category exporting is set, users will find an Options button on their screen when they view a category

- Click on the **Options** button
- This opens a new options panel which allows a user to:
 - Search for items specifically within the category they are looking at
 - Create a PDF document
 - Create a printable html page. This contains basic text without all the headings and left menu and right information block.
- The information covers all articles in the category. The user can then print or save this as required.

This functionality works in version 4.0 and above
