How to Install a Language Pack

First check if required language is not in a installed

- Log on to the knowledgebase
- Go the **Admin Area**
- Click on the **Settings** menu and choose the **Admin** tab
- See **Langauage** setting for available languages
- Choose requred language

If you can't find the desired language on the list, see how to install it below.
Language packs are available from the KBPublisher [download area](#)

- Download the language pack you desire
- Unpack it (The top-level folder of the language pack is named for the language, e.g. 'en' for English, 'de' for German)
- Copy the unpacked files to the **[kbp_dir]/admin/lang** directory of your knowledgebase
- Follow the steps above to set up language

This functionality works in version 4.0 and above
