

## I have installed PHP and MySQL and I can see only blank page. What's wrong?

---

MySQL is not enabled by default, nor is the MySQL library bundled with PHP. In order to have these functions available, you must compile PHP with MySQL support.

[PHP manual - MySQL](#)

Set `conf['debug_info'] = 1` in **`your_kb_installation_directory/admin/config.inc.php`**. It will display an error if you do not have MySQL extension enabled.
