

Using Social Sites Login

Social Sites authentication allows you to integrate social login systems with KBPublisher. Configuration requires only a few simple steps.

Steps to enable Social Login

- See [this article](#) for details.

Quick summary of the process

- End user goes to site.
- User clicks a button, such as "Login via [Google]".
- Popup appears with Social Site login form or, if already logged in, goes to the next step.
- Social Site Authentication checks for valid user credentials.
- KBPublisher authenticates the user.

Tracking logins

You can see how your [remote authentication](#) works in the KBPublisher login logs, located under **Logs > Logins**.

For debugging, the most recent remote login is logged to a file called *last_remote_login.log* in the KBPublisher cache directory (*APP_CACHE_DIR* in *admin/config.inc.php*). For example: */home/username/kb_cache/last_remote_login.log*
